PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 8+ years of experience building enterprise applications using Node.js, TypeScript, Python and React. Leads a five-person engineering team and delivers services from API design through deployment and production support. Experience includes cloud management systems, recruitment platforms and AI-assisted knowledge retrieval.

PROFESSIONAL EXPERIENCE

Persistent Systems | Engineering Lead

Dec 2023 - Present | Bengaluru

- Built Node.js and TypeScript APIs for IBM VMware Solutions, serving inventory, provisioning and usage data to the VMware Cloud Foundation console. Defined API contracts and enforced tenant-level access controls.
- Developed the Goal API and project-planning services in Python/FastAPI, including search, sorting, filtering and pagination. Added input validation, PostgreSQL migrations and transactional updates.
- Implemented asynchronous provisioning with BullMQ and Redis, idempotent job processing, retry limits and audit logging. Connected job progress and error states to React views.
- Deployed an internal AI assistant that retrieved answers from VMware documentation and operational runbooks. Added document-level permissions and source citations, with an initial read-only release to support teams.
- Created a 120-case evaluation set to test answer accuracy, source grounding and unsafe requests. Added PII redaction, prompt versioning, monitoring and rollback controls before production release.
- Reduced p95 API response time from 820 ms to 460 ms through query optimization, caching and connection pooling. Added OpenTelemetry traces and dashboards to diagnose latency and service errors.
- Led five engineers through design reviews, mentoring and production support. Automated unit, integration and API-contract tests in Docker-based Jenkins and GitHub Actions pipelines.

ContactPoint 360 | Senior Software Engineer

Dec 2022 - Dec 2023 | Gurugram

- Developed Node.js/Express services for a job platform, covering candidate profiles, job listings and application workflows. Built REST endpoints and GraphQL resolvers for recruiter views.
- Reduced p95 search latency by 35% with MongoDB compound indexes, cursor pagination and Redis caching. Tuned queries for common recruiter searches and filters.
- Built background workers for notifications and resume processing, with retry limits, duplicate-job detection and dead-letter queues for failed tasks.
- Implemented role-based access controls, request validation and audit logging. Added integration tests for application status changes and recruiter permissions.
- Built React interfaces against shared API contracts and resolved production issues across the client, services and database. Added regression tests for recurring failures.

Infogain | Frontend Engineer

May 2018 - Nov 2022 | Noida

- Built React and Angular applications for the Sabre airline platform and contributed Node.js endpoints for flight search, itineraries and booking status.
- Developed an integration layer to normalize upstream API responses, handle timeouts and map errors consistently. Added bounded retries for transient read failures.
- Migrated legacy Angular interfaces to React and built reusable components for booking and account workflows while maintaining API compatibility.
- Added unit and integration tests for API adapters and UI state changes. Worked with backend and QA teams to reproduce production defects and validate fixes.

TECHNICAL SKILLS

Backend and APIs: Node.js, Express.js, TypeScript, Python, FastAPI, REST, GraphQL, OpenAPI

Databases and queues: PostgreSQL, MongoDB, Redis, BullMQ, SQL

AI and LLMs: Retrieval-augmented generation (RAG), embeddings, LLM APIs, evaluation

Testing and DevOps: Jest, pytest, Docker, Jenkins, GitHub Actions, OpenTelemetry

Frontend: React, JavaScript, Angular, Redux, React Query

EDUCATION

B.Tech in Computer Science | IMS Engineering College (AKTU) | 2014 - 2018
